

I am AGAINST approval of this broadband noise source. Approval of ET 03-104 would violate the existing FCC rules on non-interference and would be contrary to the best interest of the public.) The power companies have many existing means including..fiber cable embedded in power lines that do not create harmful interference. I would also like to see more stringent rules on RF Emmisions from consumer electronics...such as digital displays and the like. The existing RF over Power Lines has already been shown to cause industrial control failures and reset when signaling occurs since the conducted RF is not always removed from the power sent to industrial consumers.
